---

Vina,

I have searched all over to find you. I read an article in the newspaper in the Columbus Dispatch and one in the Springfield newspaper and each mentioned your name. My husband worked at the plant for 8 years as a guard. He was around all sorts of contamination (of course). He was exposed to a gas of some sort a few years ago that caused the five of them in the room to all have medical problems. At first they told them it was carbon monoxide and that if they had been in the room for another hour (they had only been in the room for about 2 hours) they would have died. After all complained of the same symptoms and required a few weeks off work, the plant decided that it was just all in their heads. They lost their workers' comp case and all. As I said before my husband used to work there. Luckily he was one of those who was laid off. He has no medical problems now but figures he will die of some sort of cancer from working out there. We are interested in finding out just what it is you do or what sort of insight you could possibly give us as to what he may have been exposed to and what you have found out about that place. So many people around here just turn their heads to what is going on. I have small children and hate for them to even drink the county water! Who knows what we are really drinking. My niece lives in the Beaver area and has a well for her drinking water!!! She won't listen to us though she like most around here don't believe the plant has ever had a release. We look forward to a response from you.
